

INERTIA

simple continuous deployment on any platform, from any platform

UBC LAUNCHPAD 2018

Robert Lin - Chad Lagore - John Lee - Roger Yang - Arjan Sandhu - Jordan Schalm - Bruno Bachmann

golang command line tool for simple continuous deployment

ease of use
docker-compose support
security

live website or service

github

```
$ git commit  
$ git push
```

(downloads dependencies, etc.)

your
project code

docker-compose
file

docker-compose up

docker
image

\$docker run

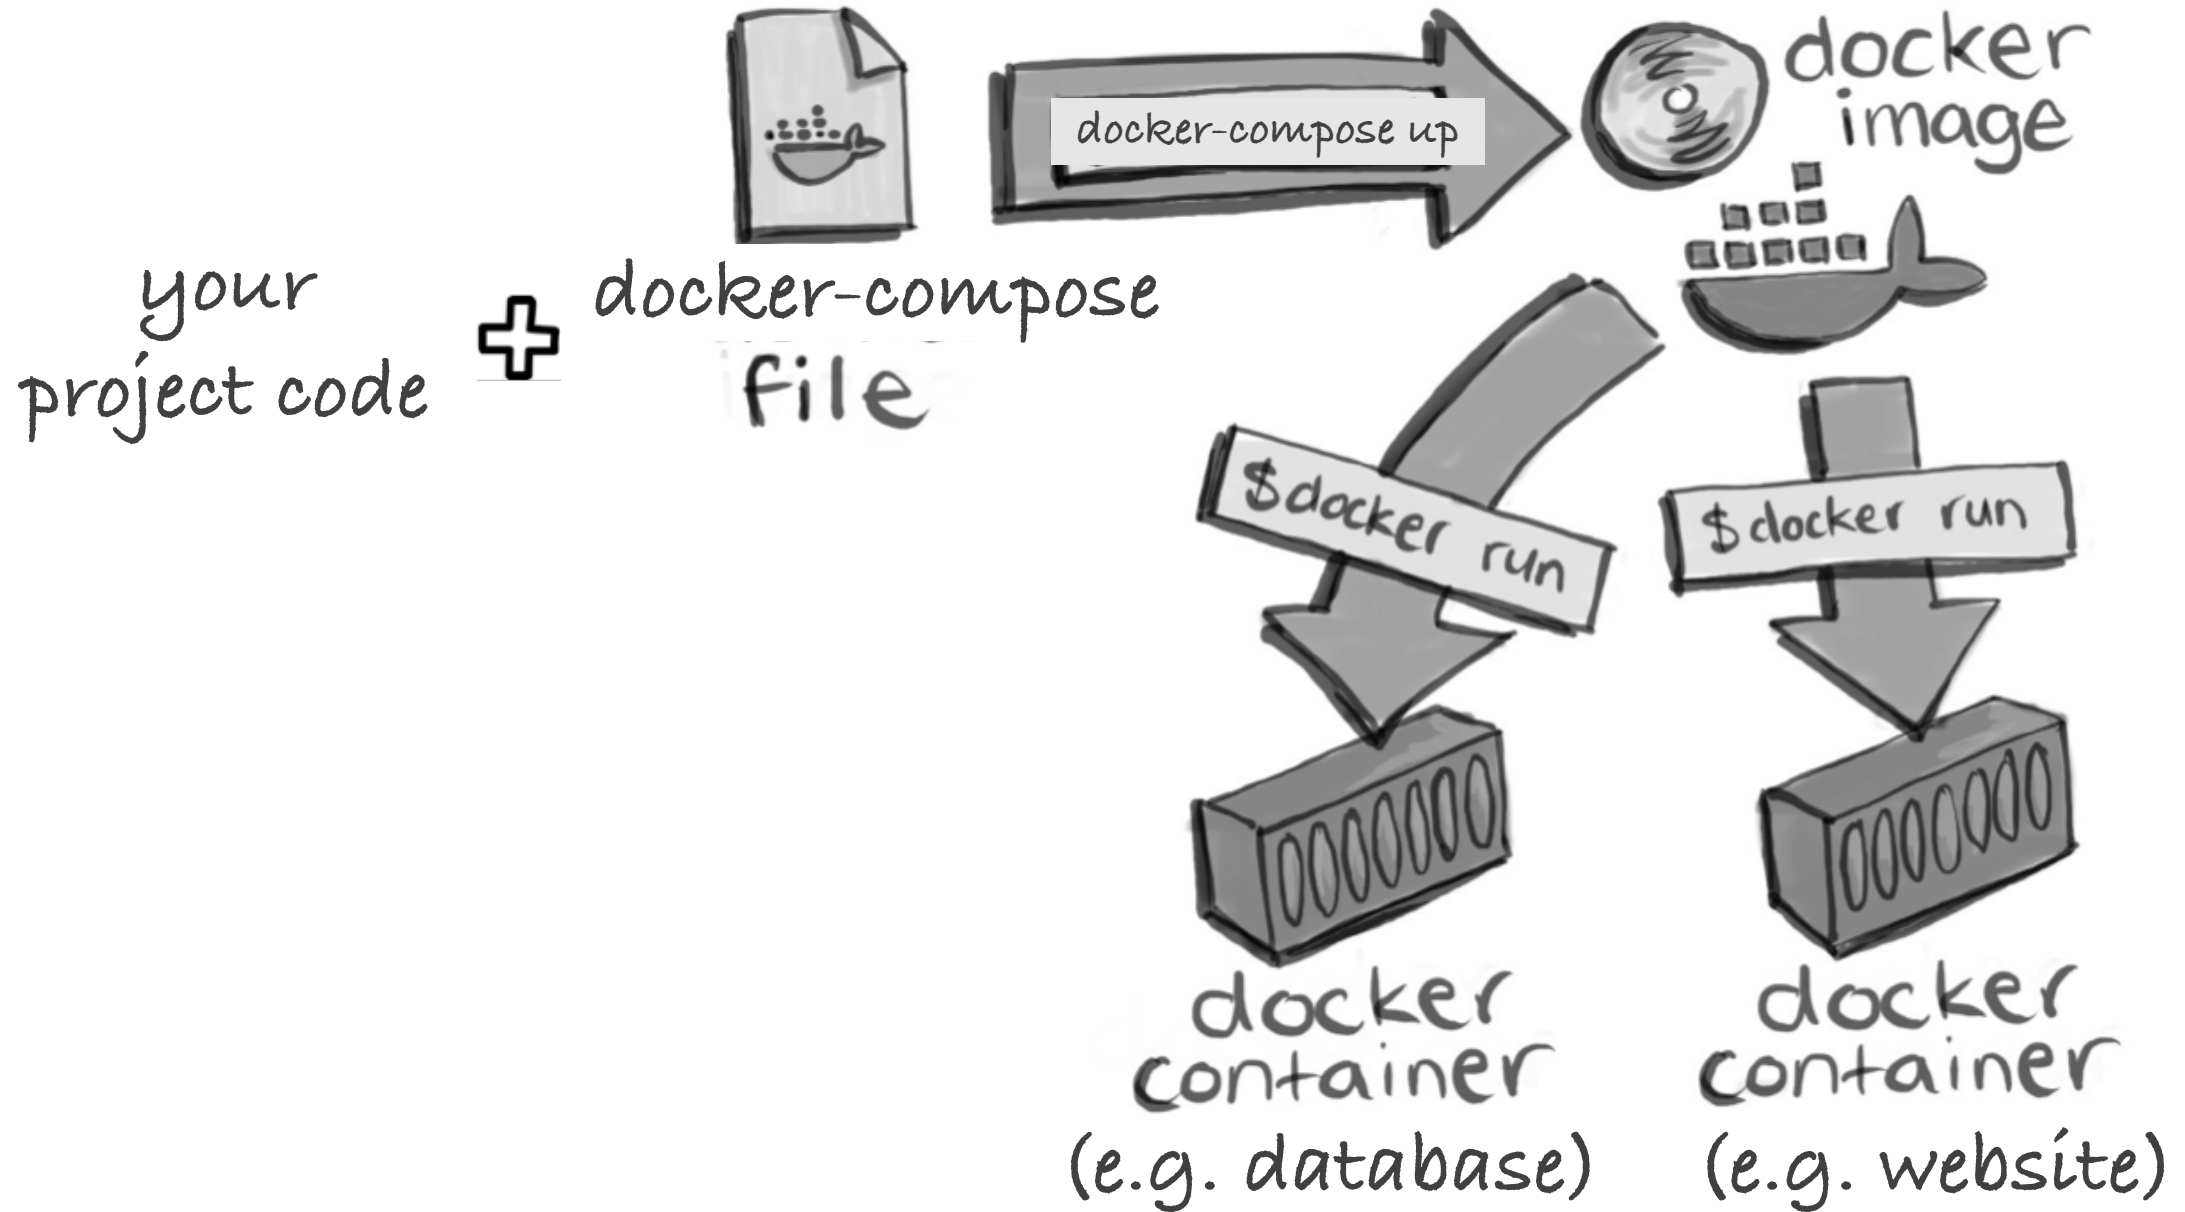

docker
container

\$docker run

docker
container

(downloads dependencies, etc.)

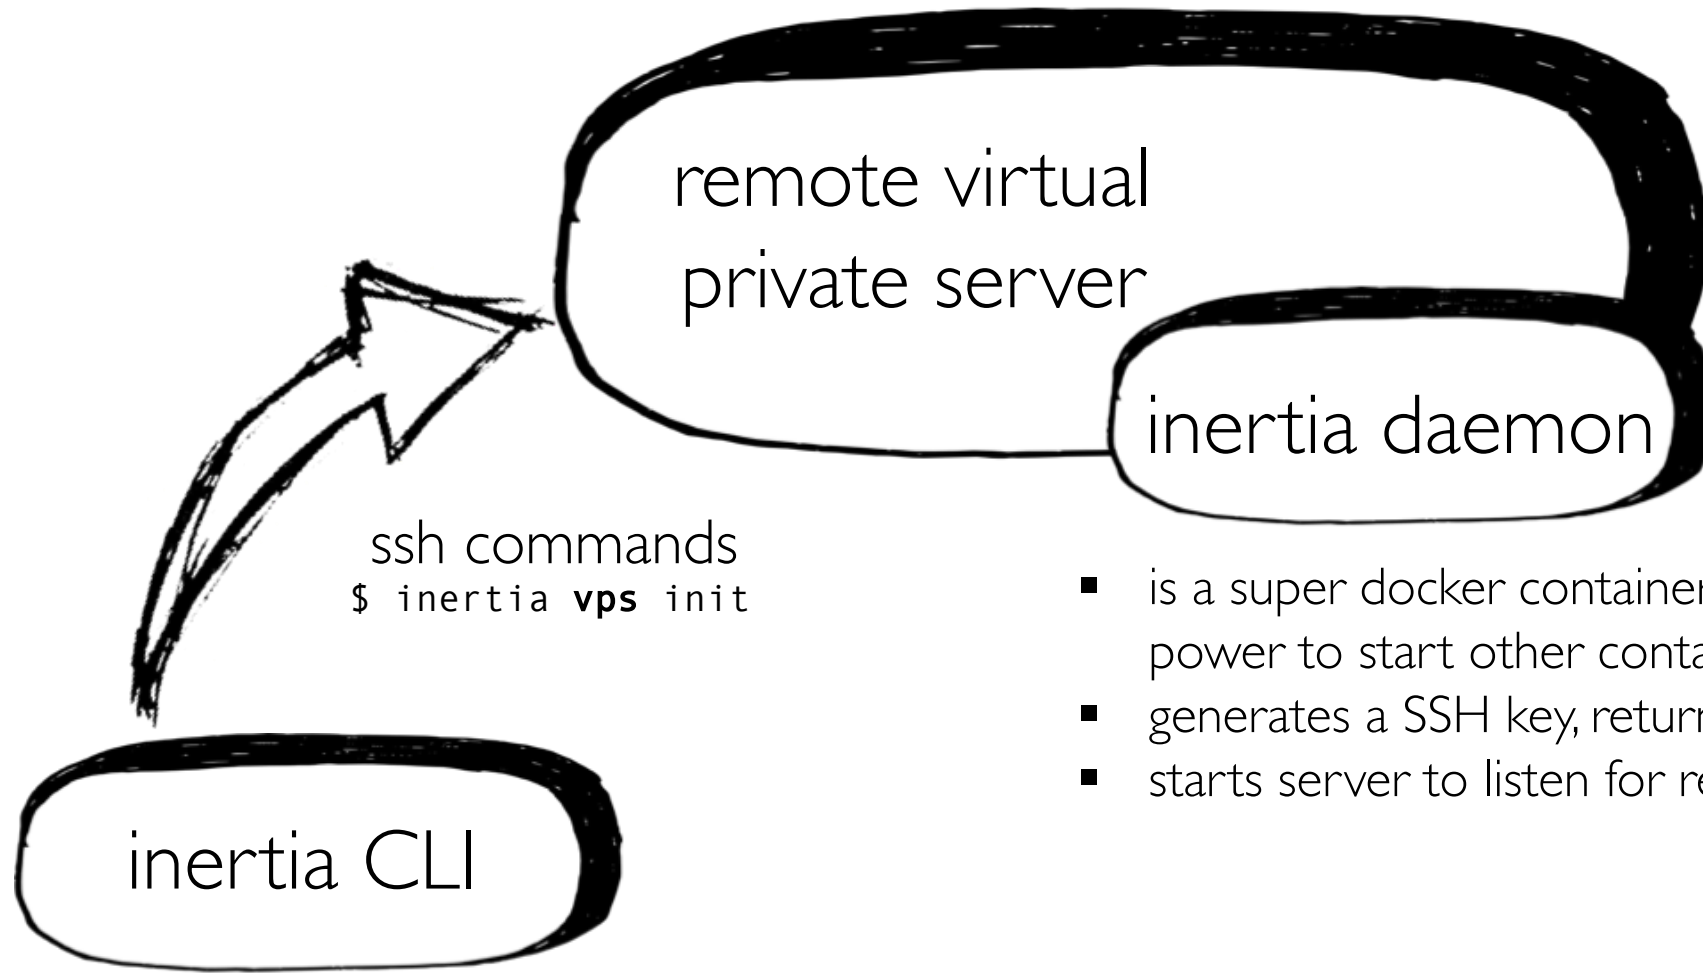

```
$ inertia init  
$ inertia remote add vps  
$ inertia vps init
```

remote virtual
private server

ssh commands
`$ inertia vps init`

inertia CLI

- is a super docker container with the power to start other containers
- generates a SSH key, returns to user
- starts server to listen for requests

remote virtual
private server

inertia daemon

authenticated using daemon's SSH key
delivered via JSON web tokens

inertia CLI

http requests

```
$ inertia vps up  
$ inertia vps status  
$ inertia vps down
```

remote virtual
private server

your docker
project

\$ git pull
builds and
starts

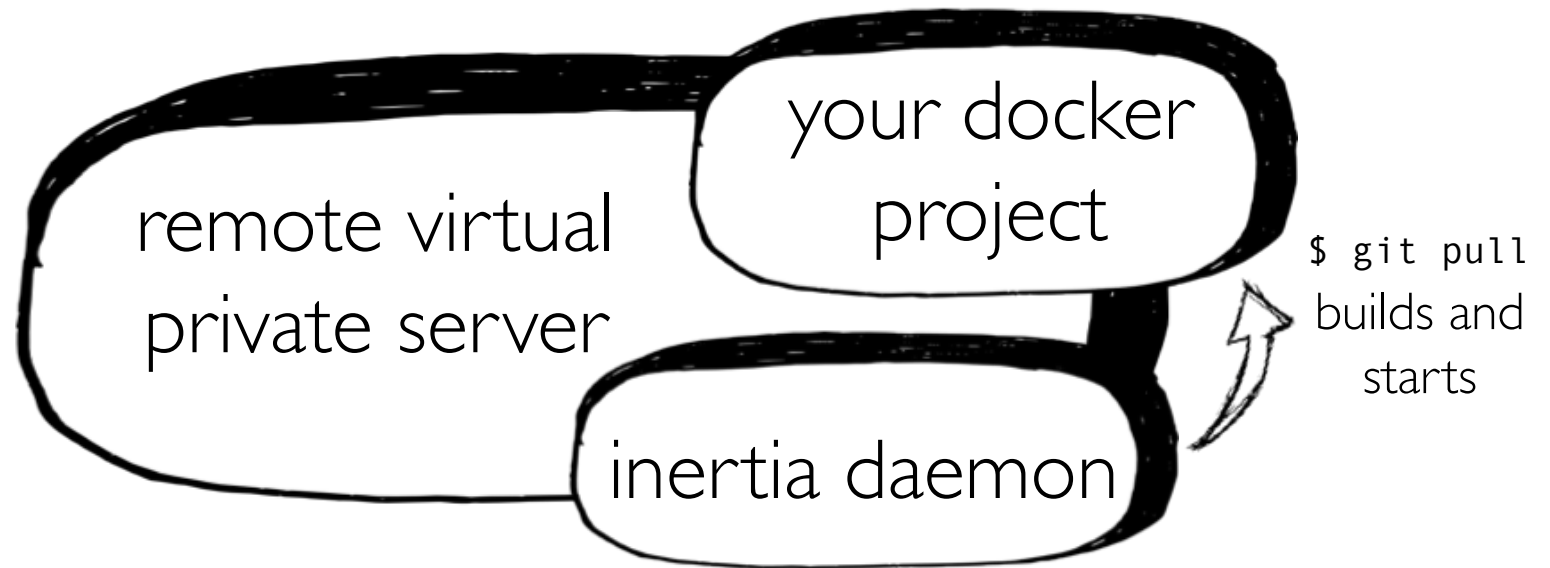

inertia daemon

inertia CLI

http requests

```
$ inertia vps up  
$ inertia vps status  
$ inertia vps down
```

inertia CLI
